Total Net Asset Value of the whole Fund:	4,823,976,153 HUF
Net Asset Value of PLN series:	3,220,410 PLN
Net Asset Value per unit:	0.792346 PLN

INVESTMENT POLICY OF THE FUND:

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

MARKET SUMMARY:

The stock markets suffered significant losses in the last month of the year; such a decline in December was not seen since the Great Depression of the 1930s. Regarding the whole year of 2018, the main equity indices suffered their worst year in a decade, while the Hungarian equity market managed to close at flat.

At the beginning of December, the US yield curve was inverted for the first time since 2007, namely the two-year and the five-year yield spread dropped below zero. As a result of this, the investors feel that the next recession can be closer than we think; the reverse yield curve was previously a good sign of the coming recession in most cases. However, based on the CNBC information, this was the root cause of the correction in early December after the US Hedge Funds and their trading robots could be activated because of the inversion. The remainder of December was also characterized by very high volatility.

The European equities fell to a two-year low with such a high daily loss that was not seen since the Brexit vote. At the end of the month, the US equity market managed to rebound with an unprecedented daily rise (5%), thus the US equities closed the year with a nearly 7% drop but not at annual low. In addition to the deteriorating technical picture, the fall was accompanied by a further increase in trade-war tension after the Huawei's Chief Financial Officer was arrested in Canada on US request. Moreover, in line with the official expectations, the FED raised the target base rate with 25 basis points, bringing additional sellers to the markets.

We received new important impulses from Europe as well. The Italian market has outperformed the developed markets after the European Commission has approved the new Italian 2019 budget plan, which estimates a 2.04 percent deficit target. In addition, Theresa May managed to survive the vote of no confidence but the fact that 117 Members voted against her questions whether the Brexit agreement can pass through the British parliamentary vote.

The fall in equities had a negative impact on the performance of our equity-focused absolute return funds. In our opinion, the markets overreacted the growth fears and in the short term, we consider the markets to be oversold. In December, we increased our exposure in PlayWay shares, while we opened a long position in SBO and Erste. The Erste Bank was negatively affected by the Romanian market sell-off, which was not attributed to the fundamentals thus we replaced our exposure to the European banking sector with Erste shares. In addition, we have increased emerging market exposure at index level, while we have also opened German and American long positions, which were closed after the weak US PMI data. Regarding the fund's fixed income exposure, we increased our short Bund position in December.
