Net Asset Value of R series:	2,377,290,493 HUF
Net Asset Value per unit:	1.286950 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

After the record fall in December, the beginning of the year on stock markets has been favourable for the equity prices. Both developed and emerging markets could increase their value. The Emerging market index and America also showed a 9% rise in the first month of the year, while in US dollar terms, Hungarian equities could also rise by 6%. The rise was mainly due to the decline in the Fed's rate hike and the easing of the US-China trade war. In addition, the longest government shutdown in America's history has ended, after Donald Trump has announced that he will sign a budget for three weeks for government agencies. However, the President continues to insist on building the wall on the Mexican border, if no agreement can be reached, another shutdown may come and even a state of emergency can be announced. The oil price also managed to rebound this year thanks to the declining stocks, easing in trade war and turmoil in Venezuela. Europe is still under pressure because of the uncertainty surrounding Brexit. In mid-January, the Brexit draft was voted down by the British Parliament as expected, while Plan B for further steps (planned by the Prime Minister) was voted on 30th January. Although, after the vote, several Representatives of the Union have indicated that they do not support the proposals. Though Theresa May rejects another referendum, some sources suggest that there is already a draft that would offer three versions for the British population: no-deal, May plan or stay. In our opinion, the postponement of 2-years deadline of Article 50 is the most likely scenario, but uncertainty increases the likelihood of a hard-Brexit output. We think that hard-Brexit is not priced in at all, thus such a negative scenario can bring serious sellers to the market but the convergence of the parties and any agreement may reduce pressure on the British and European equities. In December global equities suffered from flow capitulation, equity funds recorded their largest 2 weeks outflow of USD 30bn since 2008. We treated that record outflow as a contrarian buy signal, thus in early January, we opened a tactical long position in the emerging market. In addition, we increased our exposure in the telecom sector and a significant position in Romanian bonds was also built, this exposure was covered and the cover was closed at 67 level of RONHUF.

ASSET ALLOCATION OF THE FUND ON 01/31/2019
