Total Net Asset Value of the whole Fund:	4,618,262,036 HUF
Net Asset Value of PI series:	7,042 PLN
Net Asset Value per unit:	0.863315 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

Annualized standard deviation of the benchmark's weekly yields:	42.47 %
WAM (Weighted Average Maturity):	0.00 years
WAL (Weighted Average Life):	0.00 years

MARKET SUMMARY:

After the record fall in December, the beginning of the year on stock markets has been favourable for the equity prices. Both developed and emerging markets could increase their value. The Emerging market index and America also showed a 9% rise in the first month of the year, while in US dollar terms, Hungarian equities could also rise by 6%. The rise was mainly due to the decline in the Fed's rate hike and the easing of the US-China trade war. In addition, the longest government shutdown in America's history has ended, after Donald Trump has announced that he will sign a budget for three weeks for government agencies. However, the President continues to insist on building the wall on the Mexican border, if no agreement can be reached, another shutdown may come and even a state of emergency can be announced. The oil price also managed to rebound this year thanks to the declining stocks, easing in trade war and turmoil in Venezuela. Europe is still under pressure because of the uncertainty surrounding Brexit. In mid-January, the Brexit draft was voted down by the British Parliament as expected, while Plan B for further steps (planned by the Prime Minister) was voted on 30th January. Although, after the vote, several Representatives of the Union have indicated that they do not support the proposals. Though Theresa May rejects another referendum, some sources suggest that there is already a draft that would offer three versions for the British population: no-deal, May plan or stay. In our opinion, the postponement of 2-years deadline of Article 50 is the most likely scenario, but uncertainty increases the likelihood of a hard-Brexit output. We think that hard-Brexit is not priced in at all, thus such a negative scenario can bring serious sellers to the market but the convergence of the parties and any agreement may reduce pressure on the British and European equities. The Turkish stock market was one of the best performing stock markets in the first month of the year but the Fund slightly underperformed its benchmark index due to the large underweight in the banking sector. The fund is looking for more defensive equities, with low indebtedness thus avoiding real estate and banking companies.

ASSET ALLOCATION OF THE FUND ON 01/31/2019

Asset type	Weight
International equities	98.42 %
Receivables	4.64 %
Liabilities	-3.96 %
