Net Asset Value of institutional series:	83,588,180 PLN
Net Asset Value per unit:	1.366025 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey, although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

Annualized standard deviation of the benchmark's weekly yields:	16.99 %
WAM (Weighted Average Maturity):	0.00 years
WAL (Weighted Average Life):	0.00 years

MARKET SUMMARY:

After the record fall in December, the beginning of the year on stock markets has been favourable for the equity prices. Both developed and emerging markets could increase their value. The Emerging market index and America also showed a 9% rise in the first month of the year, while in US dollar terms, Hungarian equities could also rise by 6%. The rise was mainly due to the decline in the Fed's rate hike and the easing of the US-China trade war. In addition, the longest government shutdown in America's history has ended, after Donald Trump has announced that he will sign a budget for three weeks for government agencies. However, the President continues to insist on building the wall on the Mexican border, if no agreement can be reached, another shutdown may come and even a state of emergency can be announced. The oil price also managed to rebound this year thanks to the declining stocks, easing in trade war and turmoil in Venezuela. Europe is still under pressure because of the uncertainty surrounding Brexit. In mid-January, the Brexit draft was voted down by the British Parliament as expected, while Plan B for further steps (planned by the Prime Minister) was voted on 30th January. Although, after the vote, several Representatives of the Union have indicated that they do not support the proposals. Though Theresa May rejects another referendum, some sources suggest that there is already a draft that would offer three versions for the British population: no-deal, May plan or stay. In our opinion, the postponement of 2-years deadline of Article 50 is the most likely scenario, but uncertainty increases the likelihood of a hard-Brexit output. We think that hard-Brexit is not priced in at all, thus such a negative scenario can bring serious sellers to the market but the convergence of the parties and any agreement may reduce pressure on the British and European equities. Polish shares closed a good month in January and slightly outperformed Central European markets. Low capitalization papers, which were significantly underperforming last year, also closed a good month and performed in line with medium and higher capitalized Polish shares. We are currently more optimistic about MDWIG members, they are attractive in terms of pricing and EPS growth within the Polish market, thus we hold overweighted position in these midcap equities.
