Net Asset Value of HUF series:	2,752,215,711 HUF
Net Asset Value per unit:	1.662140 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

In February, the developed market equities continued to rise with a slower pace, while the emerging market equities underperformed for the first time since October. The performance of the Central and Eastern European equities was weaker last month, the domestic equity index (BUX) closed the month in the negative territory. The rise in US equities was supported by the avoiding of the further government shutdown, positive expectations surrounding the trade negotiations and the "patient" position of the FED in further interest rate hikes. However, the 2800 point level is still a resistance for the S&P 500 index. FED decision-makers prefer the wait due to weakening inflation, depressed global growth and falling stock and corporate bond prices. However, the American last quarter GDP data was stronger than expected. The international sentiment was still mostly influenced by the trade war. However, according to the Wall Street Journal, the American and Chinese positions are getting even closer to make a formal agreement in March. The trade war optimism also helped Chinese stocks. Although it was one of the worst capital markets last year, the Shanghai Stock Exchange Composite Index is currently one of the biggest winners this year and is already showing a 25% rise. The rise was also driven by the Chinese government's stimulus measures, in addition, the MSCI index provider would also increase the weight of Chinese shares in its global indices. Brexit remains one of the most important drivers on the European markets. The market is expecting the postponement of the deadline of 29 March. It is planned that on 12 March, Theresa May again submit to the British Parliament a revised Brexit agreement to vote, if the decision-makers reject it again, they can vote on extending the deadline. After a minor correction in early February, oil prices continued to rise. The fall in US crude oil stocks, the Venezuelan political crisis and the OPEC countries' efforts to reduce production have contributed positively to the price of the "black gold". We also received positive news about Hungary in the month, both S&P and Fitch Ratings upgraded Hungary's sovereign debt rating to a stable outlook. The fund achieved positive performance in February but was somewhat below the benchmark performance. The best month in the Asian market was closed by Hong Kong and China, while Indian and Japanese equities underperformed in Dollar terms. The performance of the fund was negatively affected by our overweighted position in the Japanese equity market, although our Chinese market weight was neutral but our fund covering this market was underperforming after having a lower exposure to the local A-shares.

ASSET ALLOCATION OF THE FUND ON 02/28/2019

Asset type	Weight
