Net Asset Value of HUF series:	6,978,542,184 HUF
Net Asset Value per unit:	2.281398 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, very low-risk investment vehicle, but to offer investors better returns than bank deposits. The portfolio elements are selected in accordance with these principles. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills distributed by the State Debt Management Centre (ÁKK), and bonds issued by the National Bank of Hungary. The average duration of the assets in the portfolio is 6 months, and the average remaining life of the assets may not exceed 12 months. The fund is low-risk, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. In the case of floating rate, forint denominated debt securities the average duration is equal to the number of days remaining until the next interest payment day. The fund may also invest its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Money Market Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

The MPC left the monetary conditions unchanged on its meeting on the 26th February. In its communication, the NBH emphasized that it is ready for gradually tighten the monetary conditions, which will be carried out via the optimal combination of the non-conventional FX-swaps and the interest rate corridor. The normalization process will depend on the sustainable inflation trend. Money market yields did not change only slightly in February. The 3-month BUBOR rate stagnated at 15 basis points, while the 12-month BUBOR hovered around 50-51 basis points. The 3-month T-Bill reference yield increased from 8 to 12 basis points while the 12-month reference yield continued to stagnate at 37 basis points. The GDMA gradually reduced its 3-month T-Bill issuance, thus reducing it further to 25 billion HUF. The auctions resulted in average yields at 2 and 3 basis points. As for the 12-month T-Bill auctions, the offered amount was reduced further to 30 billion HUF, while average yields were equal to 36 and 38 basis points. At the end of February, the preferential deposit facility of the NBH is ceased to exist, but on the contrary, the outstanding amount of the non-conventional FX-swaps did not reduce either. This indicates that there is still a large amount of liquidity within the banking system. As a consequence, short-term yields are more likely to stay low even during a tightening scenario, while the maturities starting from 1-year will be affected in a larger extent.

ASSET ALLOCATION OF THE FUND ON 02/28/2019
