Net Asset Value of HUF series:	2,898,970,948 HUF
Net Asset Value per unit:	1.777398 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

## MARKET SUMMARY:

Main equity indices started the new quarter with increase thanks to the positive developments surrounding the trade negotiations and the better-than-expected Chinese data. Due to several better-than-foreseen corporate reports and positive investor sentiment, the S&P 500 and the Nasdaq Composite Index managed to reach a new absolute peak in April. The rise was mainly driven by the positive sentiment, analysts did not significantly improve their earnings forecasts which also means that shares became more expensive. Market participants were already pricing the end of the trade war as all of the news was foreshadowing that the final agreement is coming. This positive mood was broken by Trump at the beginning of May. He announced that tariffs on \$200 billion of Chinese imports will be increased to 25 percent from 10 percent and another \$325 billion in goods will "shortly" be subject to tariffs. The US President's rhetoric caused drop in equity markets; the Chinese A-shares has almost lost 6 percent in one day. Oil prices continued to climb up in April after growth fears eased and the US government was projecting a complete abolition of Iranian oil exports. The growth was once again interrupted by the US President, who called on OPEC countries to increase their production thus the oil began to make a serious correction at the end of the month. However, positive data have been published on the growth of the world's largest economy, the US economy expanded by 3.2 percent in the first quarter of the year, far ahead of the previous 2.2 percent and expected 2.5 percent. This data also supported the strengthening of Dollar which showed a relative strength compared to both developed and emerging market currencies thus the EURUSD broke below the 1.12 level that used to be a resistance. We got also information about the growth of the Chinese economy, the world's second-largest economy grew by 6.4 percent in the first quarter. Since the expiration of the Brexit deadline to October, we have received a little less impulse on this front, although the British political chaos has not cleared up. In contrast to expectations, no significant progress was made in the negotiation of the bipartisan agreement between Theresa May and Jeremy Corbyn. The fund achieved good performance in April but somewhat underperformed the benchmark index as a result of our Japanese market overweighted strategy. Within the Asian markets, the best month was closed by Taiwanese and Chinese equities, while India and Korea underperformed. Apart from the Japanese market, we hold overweighted position in the Indonesian market against the Korean equities as the pricing of the Korean equity market was considered to be too excessive.

## ASSET ALLOCATION OF THE FUND ON 04/30/2019

Asset type	Weight
Collective securities	97.98 %
Current account	2.20 %
Liabilities	-0.20 %
Receivables	0.02 %
total	100.00 %
