INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

MARKET SUMMARY:

Escalation of trade war rhetoric by the US president weighed on markets in May. Negotiations with China broke down and Donald Trump threatened Mexico with further tariffs and withdrawing India's special trade status. Equities finally started to fall while core bond markets rallied on safe haven buying and further rate cut expectations as the Fed turned even more dovish. Driven by the developments we increased the defensive tilt in the portfolio by opening long gold and short developed equity positions. We increased HUF duration in the fund as global yields started to decrease and the HUF appreciated while also closing most of our HUF shorts. We further decreased the weight of high yield EM exposure.
