Net Asset Value of institutional series:	14,074,256,933 HUF
Net Asset Value per unit:	1.629307 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

After 6 years the old Wall Street axiom, sell in May and go away, has worked again. It was in 2012, when the S&P 500 index had such a bad month. Back then it fell 6.3%, last month the index returned -6.6%. But this was still better than the emerging markets performance, which closed down the month by 7.5%. There were multiple factors that contributed to last month's bad performance. First of all, the American-Chinese trade war clouded the investment horizon. At the beginning of the month, the major indices opened at new all-time highs because investors were hopeful, that the trade conflict will be resolved soon. But the American president had other thoughts, and raised the tariffs to 25% on imports from China to the United States. At the end of the month the US president imposed 5% tariffs on Mexican goods too, although he just signed the new NAFTA agreement a few months ago. The macro economic data was mixed in May. So far, it seems that the tariff war does not hurt the US economy. More people are working, the GDP is expanding and the inflation is negligible. However the Chinese macro-economic data suggest the opposite. Their GDP is shrinking, the inflation is growing, and the export numbers fell off dramatically. So far, it looks like the U.S. is winning the trade war but as we know the Chinese are planning for the next 2 years but rather the next 50. We are looking cautiously ahead for the next few months. Certain data suggests that a defensive approach should be appropriate in the near term. The falling yield on the 10 and 30 bonds might suggest a slowing economy, but the 3 month-10 year spread might suggest that even a mild recession is not out of order. Europe looks bleakly too, the German 10 year yield hit a new all-time low, and the Brexit is still hovering on the horizon. The fund's performance was negative in May, because there was a selling wave sweeping thru the markets in concern of the American-Chinese trade war. The main reason the fund underperformed its benchmark is because the fund's American value oriented portfolio did not perform well. We were active in our EU stock portfolio in May, which manifested in a way that we reduced the ETF exposure and increased the stock exposure in the same amount. We are still holding the European banking sector overweight that was established in April.

ASSET ALLOCATION OF THE FUND ON 05/31/2019

Asset type	Weight
Collective securities	75.49 %
