Net Asset Value of PLN series:	6,484,379 PLN
Net Asset Value per unit:	1.184435 PLN

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

MARKET SUMMARY:

Donald Trump and president Xi Jinping managed to come to a trade truce on the G-20 meeting in Osaka and agreed to continue with the trade negotiations. In Europe, Boris Johnson was elected to be the UK's next prime minister, who is known to be a Hard-Brexiter and did not wait long to promise that the UK will leave the EU at the end of October whatever happens. The global macro picture paints a mixed picture. The US data is still somewhat robust, while China and Europe are struggling more. Maybe this is the reason why Mario Draghi, resigning ECB president said that the ECB won't rule out any tool to stimulate the European economy. The German 10yr government bond already started to price in the new wave of monetary stimulus and managed to decrease to its lows in yield after Draghi's comments. The FOMC held its meeting at the end of the month where it decided to lower the base rate by 25 basispoints in line with expectations. However, Jerome Powell Fed chair gave a speech that turned out somewhat more hawkish which took the market by surprise. We raised local currency duration and partly closed this position already with profit at the end of the month. OUR EM and EU banks equity exposures had to be stopped out as risk appetite reversed. We bet on the fall of iron ore prices: spot prices are much higher than long term fair values due to (hopefully) temporary supply disruptions.

ASSET ALLOCATION OF THE FUND ON 07/31/2019
