Net Asset Value of institutional series:	4,325,834,462 HUF
Net Asset Value per unit:	1.144813 HUF

## INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

## MARKET SUMMARY:

The U.S. Federal Reserve Bank cut its benchmark rate by 25 basis point in September, and based on future data it may cut even more. It's mentionable, that the board was very divided about the rate cut. They were divided almost evenly, but 2 governors wanted to raise the rates. The 10 year yield sunk to a 3 year low, and the 30 year yield fell below 2%, which is the lowest ever recorded. The ECB also cut rates from -40 basis points to -50, and they restarted the asset purchase program in the amount of 20 billion euros per month. When the news came out the EURUSD cross rate went below 1,10 which was a 2 year low. In Hungary, the national bank kept the benchmark yield at 0,9% and raised the interbank liquidity amount to 100 billion HUF for the next quarter. This didn't bode well for the forint, the EURHUF rate went above 336, which was a new all time high. The fund performed well in September, but we decreased risk by the end of the month both market and individual equity level. The fund realized profits by selling its DAX, Eurostoxx, European bank, Raiffeisen, and Lukoil positions. At the end of the month the fund bought gold as a hedge.
