Start:	12/11/2003
Currency:	HUF
Total Net Asset Value of the whole Fund:	28,821,875,990 HUF
Net Asset Value of HUF series:	14,704,546,948 HUF
Net Asset Value per unit:	2.681274 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

Magyar Államkötvény 2020/O	interest-bearing	Államadósság Kezelő Központ Zrt. (HU)	2020.05.20

MARKET SUMMARY:

The Fed delivered another rate cut in September but the communication was slightly more hawkish than expected, focusing on data dependency. This caused a slight correction in US yields. The ECB acted as expected: it cut rates, introduced the tiering system and will start a new QE program with an indefinite timeframe. The EUR fell to a 2y low versus the dollar. Equities rallied until the middle of the month and traded sideways later: central bank action coupled with deteriorating data only sufficed for this. We decreased our Turkish credit exposure in the fund purchasing HY EM corporater credit instead. Exploiting the weakness of the HUF we closed our remaining long PLN/HUF position. After the ECB we took profit on our long in European banks. As data turned even worse we prepare for bad times: we used the correction in yields to increase both HUF and USD duration in the fund. As a risky position we opened BRL longs: the Brazil currency were hit parallel with Argentina, we believe it is unjustified.

ASSET ALLOCATION OF THE FUND ON 09/30/2019
