INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in order words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

For the first time in months, not the American-Chinese trade war was the centerpiece in the investors' minds. It seems that the parties agreed in a multi-phase agreement, and soon they will finalize the first phase, provided the talks will continue. The markets liked what they heard, and the major American indices went to new all-time highs. The FED cut the Fed fund rates by 25 basis points to a new range of 1.50-1.75. The macro economic data shows a mixed picture. The unemployment rate is 3,5%, the inflation rate is at 1,7%, but the ISM is still below the critical 50 level. The European economy is still struggling. So far the 2019 GDP forecast is 0,5%, and the 2020 GDP forecast is lowered to 1,1%. The German manufacturing index fell back to 48,7, which is the lowest level since 2012, the German export dropped by 1,8%, and the PM is under the critical 50 level, at 45,7. There will be a parliamentary election in England, and the result of this election will have a huge influence on January 31st exit date. In Hungary, the forint strengthened a bit against the euro, and went below the psychologically important 330 level. Since the macro factors hasn't changed, and the central bank is not bothered by the weak forint, we view this rally in the forint as technical in nature. The fund had a positive month in October but underperformed its benchmark. Athough the Asian markets performed well, but the strong forint made its mark on the fund's performance. Within the Asian markets the Indian and Taiwanese markets had the best performance, while the Japanese market underperformed its peers. Because of valuation, the fund is overweight in the Indian and Japanese markets, and underweight in the Korean and Taiwanese markets. The weakness in the dollar also helped the Asian markets.
