Net Asset Value of HUF series:	3,576,005,186 HUF
Net Asset Value per unit:	3.164485 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The Chinese-American trade war has less and less effect on the investors' decisions, and you can see this how the markets move after President Trump's tweets. In the past few months both sides communicated how the trade talks were progressing, but now the markets want to hear some concrete facts, because everything is else just "noise". This is good news for investors because they can rule out all the political uncertainty from their decisions making process. Former New York mayor announced that he is joining the race to be the next president of the U.S.A. Bloomberg's entry into the race will change the odds, because unlike Trump he is the founder-owner of the well-known international company and he feels at home in the political arena. On his congressional hearing, Jay Powell Fed chairman announced, that slow growth, low inflation, low interest rates are the new norm, and he excluded the possibility of the negative rates in the U.S. He thinks that the monetary policy is well positioned to keep the economy growing, and the FED is committed to the 2% inflation target. The European economy is still struggling, but you can see the light at the end of the tunnel. The Eurozone's and Europe's biggest economy manufacturing PM went higher, but it is still below the critical 50 level. If we take into consideration last month's all macro-economic data, then we might conclude that the European economy has reached its bottom. In Hungary, the Hungarian National Bank hasn't changed its base rate, moreover they indicated in their communique that they are easing some of their monetary conditions. This had effect on the EUR-HUF cross rate, it went to 337, which was a new all-time low. It is also mentionable that the Hungarian stock index, the BUX, went to new all-time high, and growing number of foreign investment houses are issuing buy recommendations on Hungarian equities. The fund had a positive performance last month and outperformed its benchmark. The fund is overweight in equities. On sector level, the fund is over weight in the oil and gas sector, while underweight in the mining sector. The Russian market underperformed the EM markets, but the good performance's biggest contributor was the weak HUF. The fund was overweight in equities against the benchmark by 105%.

ASSET ALLOCATION OF THE FUND ON 11/30/2019
