Net Asset Value of institutional series:	23,218,463,934 HUF
Net Asset Value per unit:	1.624440 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

## DISTRIBUTORS

Aegon Magyarország Befektetési Alapkezelő Zrt., Raiffeisen Bank Zrt., Unicredit Bank Hungary Zrt.

## MARKET SUMMARY:

In December, the US and China were reported to have reached a 'phase-one' trade deal. The Conservatives won a large majority in the UK election. US lawmakers reached a bipartisan deal in principle to avoid a government shutdown. The Fed and the ECB remained on hold and intend to stay that way for a while. Range-trading prevailed during most of the week as markets awaited central bank meetings, the UK election and some direction on trade. In the latter part of the month, sentiment turned more positive. Bond yields inched higher with 10Y Bunds approaching -0.19% and 10Y UST yields reaching close to 1.92%. EUR-USD moved back above 1.12, the CNY fell below 7.00 and the GBP rallied on the back of the election results. Credit spreads tightened across both Europe and the US. Moreover, equities attracted more solid demand and major indices are closing the month 1.5-4.0% higher. We decreased our exposure to local Hungarian government bonds, took profit in Azerbaijan papers and initiated position in Mexico's biggest oil company, Pemex.

## ASSET ALLOCATION OF THE FUND ON 12/31/2019

Asset type	Weight
Corporate bonds	37.86 %
