Total Net Asset Value of the whole Fund:	20,635,200,740 HUF
Net Asset Value of CZK series:	CZK
Net Asset Value per unit:	1.070491 CZK

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

MARKET SUMMARY:

There were 2 events in January that dominated the financial markets. The first was the corona virus coming from China, the other was the killing of Iran's #2 leader by the U.S. army. The latter affected the price of oil, which shoot up to \$65, but by the end of the month it was trading close to \$50. Regarding the virus, the markets don't know how to handle it, if there is a world wide epidemic, then the markets are overpriced. The FED had its first meeting of the year, and as it was expected they left the rates unchanged. The FED chair was slightly dovish in the press conference, but he didn't referred to anything that would indicate that he will change the interest rates in the near future. The Eurozone macro data is mixed. The industrial PMI numbers decreased, but the service sector PMI increased. The German GDP grew by 0,6% in 2019, which was the weakest number since 2003. Asia's biggest economy shows a mixed picture too. The Chinese industrial PMI decreased, but the inflation was lower than expected at 4,5%. In 2019 the Chinese GDP grew by 6,1%, which is the weakest number in 29 years. In Hungary the HUF sank to a new all-time low versus the euro. At the 338 level the HNB intervened in the FX swap markets to indicate that the HUF is too low for their taste. The HUF strengthened a little, but couldn't put in a meaningful rally. The fund posted a negative return in January. Emerging market position got stopped out during the month and Polish equity exposure decreased. Real estate and regional bond exposure contributed positively to fund performance. We remain confident in the emerging market internet and selective oil sectors and established new positions in the European banking sector. Last month the unhedged forint positions were partially closed.

ASSET ALLOCATION OF THE FUND ON 01/31/2020
