Total Net Asset Value of the whole Fund:	27,465,214,299 HUF
Net Asset Value of USD series:	712,875 USD
Net Asset Value per unit:	1.088514 USD

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

MARKET SUMMARY:

January of this year was dominated by news about the fast spread of coronavirus and by concerns that this might jeopardize recent signs of stabilization in economic indicators globally. Concerns about coronavirus caused financial markets to display a typical risk-off pattern. Equity indices came under pressure, particularly in the last week of the month. Oil dropped severely to levels only seen in December 2018. USTs and Bunds were in demand, with their yields falling to fresh 2020 lows. In terms of currencies, the USD and the JPY have been the main beneficiaries in this risk-off environment, whereas EUR-USD has remained around 1.10. In the fund we increased the weight of HY EM credit while selling local currency Romanian government bonds. We were stopped out of our long MOL call. We put up some hedges: we increased our long gold position, we opened a long in 5-year US treasuries and bought Czech government bonds. Short HUF positions of the fund were gradually closed as we approached record weak levels.

ASSET ALLOCATION OF THE FUND ON 01/31/2020
