Total Net Asset Value of the whole Fund:	71,187,373 PLN
Net Asset Value of HUF series:	1,326,598,068 HUF
Net Asset Value per unit:	1.148167 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey, although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

In February, investors focused on the spread of the coronavirus from China to other parts of the world. By the end of the month, the virus was already present in Europe, causing investors to panic and a selling wave swept thru the markets. In the last third of the month, US indices hit new all-time highs, but as the virus spread more and more in Europe, markets began to plummet and most indexes fell to levels not seen since last October. The FED president also highlighted the coronavirus epidemic as a potential risk and threat to the economy and said that they are responding to incoming data, meaning that all decisions are data dependent. The outlook deteriorated significantly in the February ZEW Business sentiment index, which is one of the first to reflect the outbreak after the outbreak, according to European macro data. According to a monthly report from the German Ministry of Finance, the coronavirus epidemic poses a risk to German and European economic activity, but is still holding this year's 1.1 percent growth expectation. This is reflected in the exchange rate of the euro, which reached a new multi-year low against the dollar. The impact of the virus is most visible in the Chinese economy. Caixin China's manufacturing PMI in January was lower than expected at 51.3 to 51.1, but the survey does not yet include a major economic slowdown due to the epidemic. In Hungary, the forint has fallen to a new low against the euro. The MNB did not take 340 level lightly and intervened verbally in the interest of the Forint. As a result, the forint appreciated to the level of 335, but it is not yet known whether this appreciation will be permanent or not. The fund closed the month down but outperformed its benchmark. The fund remains neutral in large-cap exposure, underweight in the banking, utilities and commodities sectors, and overweight in the midcap universe. At the end of the month, the telecom underweight was reduced to a neutral level.
