Total Net Asset Value of the whole Fund:	9,207,530 EUR
Net Asset Value of EUR series:	3,404,891 EUR
Net Asset Value per unit:	0.009318 EUR

## INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primarily invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

## MARKET SUMMARY:

In February, investors focused on the spread of the coronavirus from China to other parts of the world. By the end of the month, the virus was already present in Europe, causing investors to panic and a selling wave swept thru the markets. In the last third of the month, US indices hit new all-time highs, but as the virus spread more and more in Europe, markets began to plummet and most indexes fell to levels not seen since last October. The FED president also highlighted the coronavirus epidemic as a potential risk and threat to the economy and said that they are responding to incoming data, meaning that all decisions are data dependent. The outlook deteriorated significantly in the February ZEW Business sentiment index, which is one of the first to reflect the outbreak after the outbreak, according to European macro data. According to a monthly report from the German Ministry of Finance, the coronavirus epidemic poses a risk to German and European economic activity, but is still holding this year's 1.1 percent growth expectation. This is reflected in the exchange rate of the euro, which reached a new multi-year low against the dollar. The impact of the virus is most visible in the Chinese economy. Caixin China's manufacturing PMI in January was lower than expected at 51.3 to 51.1, but the survey does not yet include a major economic slowdown due to the epidemic. In Hungary, the forint has fallen to a new low against the euro. The MNB did not take 340 level lightly and intervened verbally in the interest of the Forint. As a result, the forint appreciated to the level of 335, but it is not yet known whether this appreciation will be permanent or not. The fund closed a negative month but outperformed its benchmark. Last month, the emerging market internet, video games, and the solar sectors were the best performers, while the insurance, luxury and defense sectors were the weakest. The Fund's share allocation is 100%.
