Net Asset Value of R series:	243,925,592 HUF
Net Asset Value per unit:	1.252337 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

Since the end of February, the whole world "caught the fever" by the corona virus. Thanks to the virus, new negative records have been broken in stock market. The U.S. stock market has never fallen 20% from a new all-time high of as fast as it did in March. The virus has moved westward from China, destroying economies, leaving a masses of unemployed behind. Fed President Jay Powell said in February that the U.S. economy is okay, but he is keeping an eye on the potential dangers posed by the virus and, if necessary, changing the central bank's fiscal policy. As it became clear how destructive to the economy the virus is in Europe, the Fed went into action. The Fed funds rate was first cut by 50 basis points and then to zero, before March Fed meeting, and when this didn't have any meaningful impact the central bank announced unlimited QE. Politicians did not put their heads in the sand either, as they did in 2008-09, and voted for an unprecedented economic stimulus package in both U.S. and in Europe. The macroeconomic data in both the developed and emerging economies are the worst that has come out in the last 10 years. Economic leaders hope this is an external shock, and when it passes, economies will return to the level they were before the virus appeared. To achieve this, extraordinary economic rescue packages have been passed, that will help both the private sector and the general public. The Hungarian economy was also affected by the virus. Both the BUX index and the forint sold off very sharply. When the EURHUF cross rate rose to 360, the Hungarian National Bank verbally intervened, which helped to go back to 350, but weakened back to a new low by the end of the month. The fund suffered the worst drawdown in its history in March because of the unprecedented sell-off in the equity markets. The fund reduced its risk exposure at the beginning of the month, and began to increase it during the month. As decision makers have responded much more quickly to the economic problems caused by the virus, we are optimistic about the period ahead and believe that this unprecedented sell-off has created a good opportunity for the long-term stock market investments. The fund's current long-term target equity allocation is 25%, which can rise to 40-45% depending on market conditions. The fund is leaning towards more active stock picking in this environment. As the magnitudes of the market movements are very different from recent years, if there is a large return on an investment, the fund will realize it regardless of the time horizon. The fund increased its exposure to regional banks, real estate and oil companies, and actively traded in MOL, Richter and other regional companies. The fund closed its previous EURHUF position, and established a short EURHUF position at the 360 level. On the credit side, the fund has not increased the duration of its portfolio and does not intend to establish any long-term bonds positions in the future.

ASSET ALLOCATION OF THE FUND ON 03/31/2020
