Total Net Asset Value of the whole Fund:	13,974,354 EUR
Net Asset Value of USD series:	109,991 USD
Net Asset Value per unit:	1.099913 USD

## INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with capital appreciation by investing in the sovereign- and quasi-sovereign bond market of Emerging European countries. The fund has no rating constraints, the fund has a permission to invest in any kind of issuer without limitation on its long-term foreign currency debt rating. The fund aims to reach the highest capital gain with rational risk taking. The fund primarily invests on the sovereign- and quasi-sovereign bond market of Emerging European countries denominated in foreign currency, but holds Hungarian local currency, long- and short-term bonds with diversification and liquidity management purposes. The fund may also invest in mortgage backed securities, and short- and long-term, fixed or floating securities of other financial institutions, municipalities or other business corporations, structured and convertible bonds. The fund's general risk level and the measure of the deviation from the target weights are determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The core part of the fund consists of the foreign currency denominated, sovereign and quasi-sovereign bonds of Central and Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), Southeast Europe (Serbia, Turkey), Baltic states (Lithuania, Latvia) and the countries of the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and also holds Hungarian local currency bonds with diversification and liquidity management purposes. In case of attractive market conditions (e.g. possible upgrade of an issuer's long-term foreign currency debt rating, change of the yield curve, market mispricing, etc.) the fund may invest in bonds of issuers not listed above. The fund does not intend to invest more than 25% of its assets in a single country. The target weight for the fund's fixed income investments in the above listed countries (target countries) is 95%. The aimed risk profile of the fund is intermediate. We do not use constraints on foreign currency debt ratings. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged debt-type collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged to the target currency (USD), although depending on market circumstances the fund may even have an open currency position. The investment policy of the fund changed on the 30th of December, 2016. Since then the fund has no benchmark, and fund performance before the change is not applicable.

## MARKET SUMMARY:

Top central banks strongly increased their asset purchase programs, while governments stepped up their policy responses as macro data started to reflect the economic damage from COVID-19. Several countries announced extensions of nationwide restriction measures until after Easter. While Chinese PMIs confirmed that the country's economy is in the process of returning to normal, composite PMIs for Italy and Spain hit record lows. Final PMIs for the Eurozone, Germany and France were all revised lower. US initial jobless claims doubled to another record high of more than 6.6mn. Oil prices jumped on expectations of production cuts. Volatility in financial markets came down, although concerns about the economic fallout from the COVID-19 crisis remain elevated. Equity markets seasawed but, on balance, edged lower. Treasury yields declined and outperformed Bunds, taking the transatlantic yield differential to almost 100bp, its tightest level in six years. Sovereign credit spreads within the Eurozone widened in anticipation of a steep increase in issuance. In corporate credit, IG cash spreads were generally 7bp wider amid a slew of new deals. The USD strengthened, causing EUR-USD to slide to 1.08 at the end of the month. We held higher duration for Kazakhstan during the month while decreased exposure to other oil names, namely Russia and Socar, coupled with closed position in Ghana, we also slightly increased duration for Poland.
