Net Asset Value of CZK series:	85,361 CZK
Net Asset Value per unit:	0.853608 CZK

## INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Since the end of February, the whole world "caught the fever" by the corona virus. Thanks to the virus, new negative records have been broken in stock market. The U.S. stock market has never fallen 20% from a new all-time high of as fast as it did in March. The virus has moved westward from China, destroying economies, leaving a masses of unemployed behind. Fed President Jay Powell said in February that the U.S. economy is okay, but he is keeping an eye on the potential dangers posed by the virus and, if necessary, changing the central bank's fiscal policy. As it became clear how destructive to the economy the virus is in Europe, the Fed went into action. The Fed funds rate was first cut by 50 basis points and then to zero, before March Fed meeting, and when this didn't have any meaningful impact the central bank announced unlimited QE. Politicians did not put their heads in the sand either, as they did in 2008-09, and voted for an unprecedented economic stimulus package in both U.S. and in Europe. The macroeconomic data in both the developed and emerging economies are the worst that has come out in the last 10 years. Economic leaders hope this is an external shock, and when it passes, economies will return to the level they were before the virus appeared. To achieve this, extraordinary economic rescue packages have been passed, that will help both the private sector and the general public. The Hungarian economy was also affected by the virus. Both the BUX index and the forint sold off very sharply. When the EURHUF cross rate rose to 360, the Hungarian National Bank verbally intervened, which helped to go back to 350, but weakened back to a new low by the end of the month. The fund had a negative return in March and also slightly underperformed its benchmark. At the regional level, the fund built an overweight position in Hungarian equities, and closed the Polish underweight and an Austrian overweight last month. At the sector level, the banking and oil sectors underperformed, while the defense and growth sectors outperformed. The fund as a whole is overweight against the benchmark due to its long-term positions.
