Currency:	HUF
Total Net Asset Value of the whole Fund:	24,804,904,344 HUF
Net Asset Value of HUF series:	11,997,455,903 HUF
Net Asset Value per unit:	2.446502 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a "total-return fund", which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## MARKET SUMMARY:

Since the end of February, the whole world "caught the fever" by the corona virus. Thanks to the virus, new negative records have been broken in stock market. The U.S. stock market has never fallen 20% from a new all-time high of as fast as it did in March. The virus has moved westward from China, destroying economies, leaving a masses of unemployed behind. Fed President Jay Powell said in February that the U.S. economy is okay, but he is keeping an eye on the potential dangers posed by the virus and, if necessary, changing the central bank's fiscal policy. As it became clear how destructive to the economy the virus is in Europe, the Fed went into action. The Fed funds rate was first cut by 50 basis points and then to zero, before March Fed meeting, and when this didn't have any meaningful impact the central bank announced unlimited QE. Politicians did not put their heads in the sand either, as they did in 2008-09, and voted for an unprecedented economic stimulus package in both U.S. and in Europe. The macroeconomic data in both the developed and emerging economies are the worst that has come out in the last 10 years. Economic leaders hope this is an external shock, and when it passes, economies will return to the level they were before the virus appeared. To achieve this, extraordinary economic rescue packages have been passed, that will help both the private sector and the general public. The Hungarian economy was also affected by the virus. Both the BUX index and the forint sold off very sharply. When the EURHUF cross rate rose to 360, the Hungarian National Bank verbally intervened, which helped to go back to 350, but weakened back to a new low by the end of the month. At the beginning of the month, the equity weight of the fund below the target weight, which gradually increased during the sell-off until it reached the target weight of 20%. Half of the equity weight represents the emerging and half the developed market. As a result of the sell-off, emerging market credit spreads expanded significantly, which has a temporary negative impact on the fund's performance. Also negatively affected the fund that the value of the hedges that were supposedly increase in a market meltdown fell significantly. Bond positions were not only hit by the chaos caused by the virus, but were also negatively affected by the significant drop in oil prices. The fund further raised the credit spread duration in the sell-off.
