Net Asset Value of HUF series:	3,335,303,579 HUF
Net Asset Value per unit:	2.315685 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

## MARKET SUMMARY:

Top central banks strongly increased their asset purchase programs, while governments stepped up their policy responses as macro data started to reflect the economic damage from COVID-19. Several countries announced extensions of nationwide restriction measures until after Easter. While Chinese FIMs confirmed that the country's economy is in the process of returning to normal, composite PMIs for Italy and Spain hit record lows. Final PMIs for the Eurozone, Germany and France were all revised lower. US initial jobless claims doubled to another record high of more than 6.6m. Oil prices jumped on expectations of production cuts. Volatility in financial markets came down, although concerns about the economic fallout from the COVID-19 crisis remain elevated. Equity markets seasawed but, on balance, edged lower. Treasury yields declined and outperformed Bunds, taking the transatlantic yield differential to almost 100bp, its tightest level in six years. Sovereign credit spreads within the Eurozone widened in anticipation of a steep increase in issuance. In corporate credit, IG cash spreads were generally 7bp wider amid a slew of new deals. The USD strengthened, causing EUR-USD to slide to 1.08 at the end of the month. We slightly fine-tuned a portfolio by increasing our exposure to the long-term German government papers.

## ASSET ALLOCATION OF THE FUND ON 03/31/2020
