Currency:	HUF
Total Net Asset Value of the whole Fund:	8,576,847,353 HUF
Net Asset Value of institutional series:	571,638,977 HUF
Net Asset Value per unit:	1.000875 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund. The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation. The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days. The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%). Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY:

Due to negative effects of the coronavirus, significant changes took place in the money market in March. Despite the huge shopping fever, inflation rate appears to be slowing down since January and in March it returned to the central bank's tolerance band, as it arrived at 3,9% y/y. The driver of the slowdown was mainly the sharp decline in oil prices. At the rate setting meeting in March - unlike other central bank's rate cutting announcements - the Hungarian central bank left the base rate unchanged, however many liquidity providing measures were implemented (one-week FX-swap tender, fixed-rate collateralized loan instrument). So, the total stock of central bank FX swap instruments had risen almost to 2200 billion HUF. However, after HUF reached yet another historic low against the EUR, the NBH gradually began to reduce liquidity. In March, three-months FX implied rates closed the month 6 bps higher, however the rise in T-bill yields was stronger. Average yield of short bills at the last auction was 80 bps, which means an increase of almost 50 bps compared to the beginning of the month. The increase in the yields of the annual T-bills proved to be modest.

ASSET ALLOCATION OF THE FUND ON 03/31/2020

Asset type	Weight
T-bills	59.47 %
Government bonds	24.93 %
Current account	15.54 %
Receivables	0.53 %
