| Net Asset Value of HUF series: | 2,857,837,229 HUF |
| Net Asset Value per unit: | 1.490980 HUF |

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

MARKET SUMMARY:

After the severe effects of COVID-19 on markets in March, EM fixed income had a decent bounce back from end-of-March lows, but remained underperformer compared to other asset classes. The underperformance can be mainly attributable to the fact that the on other markets, the effect of the Fed's extended monetary facilities had much bigger direct impact. In the hard currency space, many investment grade sovereign country took the relatively calmer period and came to the market with new eurobond issuances. We have seen major trenches coming out mainly from the GCC. The new issuances have offered quite a decent new issue premium that initiated a repricing on the whole credit curve so this factor also kept yield spreads relatively wide. At the end of the month, we have seen some commodity driven rally, that had bigger impact on HY countries that main export product is commodity. During the month the fund closed its open PLN position and sold polish local bonds, decreased its Turkish bond position and sold KazmunayGas. As new issuances came of the fund bought some Qatar USD and Hungarian EUR bond exposure.

ASSET ALLOCATION OF THE FUND ON 04/30/2020

| Asset type | Weight |
