INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The further spread of the corona virus determined the functioning of the world's economies in April. By the beginning of the month, almost all of the world's developed economies had shut down and people had been quarantined. The US stock market reached its lowest point in late March and has rallied by 30% since then. In April, the Fed announced that it would not only help the U.S. economy with loans and other financial aid, but were also willing to buy junk bond funds and thus indirectly have a say in the mechanism for allocating and pricing in the U.S. capital markets. Preliminary data confirms the central bank's actions because data shows that more than 20 million people lost their jobs in U.S.A and GDP also fell by 4.8% annualized, in the first quarter. The situation in Europe is similar to that in the United States. According to Deutsche Bank, the protracted epidemic could result in an unprecedented 13.3 percent drop in GDP for 2020. The Chinese economy is beginning to recover from the recession caused by the virus. The manufacturing PMI rose to 52 in March and there were some signs that Chinese industrial production was growing too - of course from a very low base. The Caixin Chinese manufacturing purchasing managers index was 50.1 in March, which is higher than expected. The effect of the corona virus could also be felt in Hungary. At the beginning of the month, the forint fell to a historic low against the euro. In reaction, the Hungarian National Bank raised interest rates, and as a result the forint strengthened by more than 5%. On the Budapest Stock Exchange, the share price of OTP and MOL fell to a multi-year low. The fund achieved a positive return in April and also outperformed its benchmark. At the regional level, the fund is overweight in the Hungarian market, neutral in the Polish and Austrian markets versus the benchmark. At the sector level, the banking sector is at a neutral level and the retail sector has been reduced. The fund as a whole overweight against the benchmark due to its long-term positions.

ASSET ALLOCATION OF THE FUND ON 04/30/2020
