Total Net Asset Value of the whole Fund:	10,235,324 EUR
Net Asset Value of EUR series:	3,791,057 EUR
Net Asset Value per unit:	0.009040 EUR

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primarily invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

MARKET SUMMARY:

The further spread of the corona virus determined the functioning of the world's economies in April. By the beginning of the month, almost all of the world's developed economies had shut down and people had been quarantined. The US stock market reached its lowest point in late March and has rallied by 30% since then. In April, the Fed announced that it would not only help the U.S. economy with loans and other financial aid, but were also willing to buy junk bond funds and thus indirectly have a say in the mechanism for allocating and pricing in the U.S. capital markets. Preliminary data confirms the central bank's actions because data shows that more than 20 million people lost their jobs in U.S.A and GDP also fell by 4.8% annualized, in the first quarter. The situation in Europe is similar to that in the United States. According to Deutsche Bank, the protracted epidemic could result in an unprecedented 13.3 percent drop in GDP for 2020. The Chinese economy is beginning to recover from the recession caused by the virus. The manufacturing PMI rose to 52 in March and there were some signs that Chinese industrial production was growing too - of course from a very low base. The Caixin Chinese manufacturing purchasing managers index was 50.1 in March, which is higher than expected. The effect of the corona virus could also be felt in Hungary. At the beginning of the month, the forint fell to a historic low against the euro. In reaction, the Hungarian National Bank raised interest rates, and as a result the forint strengthened by more than 5%. On the Budapest Stock Exchange, the share price of OTP and MOL fell to a multi-year low. The fund achieved a positive return in April and outperformed its benchmark. In April, the best-performing sectors were the tech- medical-fintech- and emerging internet sectors. The weakest were the insurance and water management sectors. The fund increased its exposure in the semiconductor and mobile payment sectors during the month. The allocation of the fund share is 100%.

ASSET ALLOCATION OF THE FUND ON 04/30/2020
