Total Net Asset Value of the whole Fund:	25,608,484,391 HUF
Net Asset Value of HUF series:	12,306,193,651 HUF
Net Asset Value per unit:	2.524127 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## MARKET SUMMARY:

The further spread of the corona virus determined the functioning of the world's economies in April. By the beginning of the month, almost all of the world's developed economies had shut down and people had been quarantined. The US stock market reached its lowest point in late March and has rallied by 30% since then. In April, the Fed announced that it would not only help the U.S. economy with loans and other financial aid, but were also willing to buy junk bond funds and thus indirectly have a say in the mechanism for allocating and pricing in the U.S. capital markets. Preliminary data confirms the central bank's actions because data shows that more than 20 million people lost their jobs in U.S.A and GDP also fell by 4.8% annualized, in the first quarter. The situation in Europe is similar to that in the United States. According to Deutsche Bank, the protracted epidemic could result in an unprecedented 13.3 percent drop in GDP for 2020. The Chinese economy is beginning to recover from the recession caused by the virus. The manufacturing PMI rose to 52 in March and there were some signs that Chinese industrial production was growing too - of course from a very low base. The Caixin Chinese manufacturing purchasing managers index was 50.1 in March, which is higher than expected. The effect of the corona virus could also be felt in Hungary. At the beginning of the month, the forint fell to a historic low against the euro. In reaction, the Hungarian National Bank raised interest rates, and as a result the forint strengthened by more than 5%. On the Budapest Stock Exchange, the share price of OTP and MOL fell to a multi-year low. The fund performed well in April. During the month, the fund cautiously reduced its equity exposure from 20% in March. Within equities, we prefer the emerging market to the developing. In April, the fund raised its credit exposure because we believe credit markets have not risen as much as the equity markets. Within credit, we prefer emerging markets, such as the Hungarian, Croatian and Qatari markets. During the month, the fund actively traded in foreign exchange markets, mainly in vis-a-vis to the forint.

## ASSET ALLOCATION OF THE FUND ON 04/30/2020

Asset type	Weight
