Start:	04/21/1999
Currency:	HUF
Total Net Asset Value of the whole Fund:	3,349,479,670 HUF
Net Asset Value of HUF series:	3,349,479,670 HUF
Net Asset Value per unit:	2.308083 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

MARKET SUMMARY:

In April, Fitch downgraded Italy's sovereign rating to BBB- (one notch above non-investment grade), with stable outlook. France and Spain announced plans to gradually lift containment measures from 11 May. The German unemployment rate jumped to 5.8% in April from 5.0% in March. The Fed sounded significantly less confident in a V-shaped recovery and mentioned it would do more to support the economy. US and Eurozone GDP shrank broadly in line with expectations in the first quarter of this year and thus signalled the start of a recession. Fundamental headwinds notwithstanding, equity markets resumed their rally. Major indices advanced by 3-8%, with European shares outperforming their US peers. Breaking their recent correlation with equities, Bund yields moved lower. ECB sovereign spreads tightened and Fitch's rating decision caused only moderate underperformance of BTPs. Credit markets recovered, with financials outperforming due to the prospect of regulatory relief on banks' leverage ratios from the EU. Currency markets moved sideways, while oil prices recovered from another slump. We slightly fine-tuned a portfolio by increasing our exposure to the long-term UK government papers along with decreasing it to the 10 years government bonds issued by U.S. government.

ASSET ALLOCATION OF THE FUND ON 04/30/2020

Asset type	Weight
Government bonds	70.80 %
T-bills	23.19 %
