Net Asset Value of HUF series:	19,997,037,656 HUF
Net Asset Value per unit:	5.654636 HUF

## INVESTMENT POLICY OF THE FUND:

The fund is intended to serve as a stable, moderately low-risk form of investment, and to offer investors higher returns than bank deposits over the medium term. The portfolio elements are selected in accordance with the above principles. To ensure liquidity, the fund primarily aims to hold bonds and discount treasury bills issued by the State Debt Management Centre on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary. The fund has a low risk profile, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to yield a higher return than government securities. The fund may also keep its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Domestic Bond Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

Risk and Reward Profile:

## MARKET SUMMARY:

Yields declined until the middle of the month, but later yields started to see higher volatility again. The Hungarian central bank's QE program disappointed the market right after the first month. Despite the promised large amount of asset purchases, the repurchase result of the first month was only 150 billion forint. The amount gradually decreased week-by-week, and finally the first tender of June was cancelled. This might harm central bank credibility again. On top of that, the deputy governor of the CB, Márton Nagy resigned from his post at the end of the month. The back end of the yield curve came under pressure but regional valuation improved again and the successful eurobond issues also decrease issuance needs on the local market. We decreased duration to the neutral level.

## ASSET ALLOCATION OF THE FUND ON 05/31/2020
