Net Asset Value of CZK series:	97,303 CZK
Net Asset Value per unit:	0.973029 CZK

## INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

The first wave of the crown virus beginning to slow down around the world. In both Western Europe and the United States, fewer new infections were diagnosed in the last few weeks of May than in previous months. It is an open question whether we can breathe a sigh of relief, or as the economies beginning to open up, another wave will hit. Stock markets are pricing in the best-case scenario, as the NASDAQ index is 1/2% from its all-time high in February, and other major indices also be experiencing an extraordinary rise since the March low. However, the economic data do not support a stock market rise. In the U.S., the unemployment rate has risen to 15% and more than 30 million people are out of work. The situation in Europe is similar to that in the United States. The ECB is trying to alleviate the economic difficulties caused by the crown virus with a 500 billion aid package. The European rescue package faces greater opposition than in the U.S. because 4 countries have different ideas on how to help the European economy. Some kind of aid package is needed because although economic data show an upward trend, they still point to a recessionary environment. Positive economic data is coming out of China. Exports grew by 3.5 per cent year-on-year in April instead of a double-digit decline, and inflation data were lower than expected. Consumer prices rose 3.3 percent and producer prices fell 3.1 percent year-on-year, while industrial production grew better than expected year-on-year by 3.9 percent in April. In Hungary, the MNB did not change the key interest rate at its May meeting. This is understandable because the forint has stabilized against foreign currencies and the central bank wants to see the impact of the virus on the Hungarian economy. If the economic environment becomes clearer, than necessary measures will be taken. The fund achieved a positive return in May and outperformed the benchmark. At the regional level, the fund is overweight in addition to the Hungarian and Polish markets, and neutral in the Austrian and Czech markets against the benchmark. During the month, the fund made a profit in an off-benchmark position and we further reduced the telecom sector. In the Polish market, we bought companies that could benefit from the reopening of the economy. The fund as a whole overweight against the benchmark index due to its long-term positions.

## ASSET ALLOCATION OF THE FUND ON 05/31/2020
