Start:	03/17/2016
Currency:	CZK
Total Net Asset Value of the whole Fund:	18,811,590,320 HUF
Net Asset Value of CZK series:	CZK
Net Asset Value per unit:	1.070491 CZK

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

MARKET SUMMARY:

The first wave of the crown virus beginning to slow down around the world. In both Western Europe and the United States, fewer new infections were diagnosed in the last few weeks of May than in previous months. It is an open question whether we can breathe a sigh of relief, or as the economies beginning to open up, another wave will hit. Stock markets are pricing in the best-case scenario, as the NASDAQ index is 1/2% from its all-time high in February, and other major indices also be experiencing an extraordinary rise since the March low. However, the economic data do not support a stock market rise. In the U.S., the unemployment rate has risen to 15% and more than 30 million people are out of work. The situation in Europe is similar to that in the United States. The ECB is trying to alleviate the economic difficulties caused by the crown virus with a 500 billion aid package. The European rescue package faces greater opposition than in the U.S. because 4 countries have different ideas on how to help the European economy. Some kind of aid package is needed because although economic data show an upward trend, they still point to a recessionary environment. Positive economic data is coming out of China. Exports grew by 3.5 per cent year-on-year in April instead of a double-digit decline, and inflation data were lower than expected. Consumer prices rose 3.3 percent and producer prices fell 3.1 percent year-on-year, while industrial production grew better than expected year-on-year by 3.9 percent in April. In Hungary, the MNB did not change the key interest rate at its May meeting. This is understandable because the forint has stabilized against foreign currencies and the central bank wants to see the impact of the virus on the Hungarian economy. If the economic environment becomes clearer, than necessary measures will be taken. The fund achieved a positive return in May. The fund further reduced the equity weight at the individual stock level in the May market rise, which is now stands at 45%. The fund sold the emerging internet exposure during the month, and increased the weight in the regional banks proportionately. At the same time, the fund also increased its Greek exposure. Last month's forint hedge was further reduced during the month.

ASSET ALLOCATION OF THE FUND ON 05/31/2020
