Net Asset Value of HUF series:	12,613,592,908 HUF
Net Asset Value per unit:	2.595145 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## MARKET SUMMARY:

The first wave of the crown virus beginning to slow down around the world. In both Western Europe and the United States, fewer new infections were diagnosed in the last few weeks of May than in previous months. It is an open question whether we can breathe a sigh of relief, or as the economies beginning to open up, another wave will hit. Stock markets are pricing in the best-case scenario, as the NASDAQ index is 1/2% from its all-time high in February, and other major indices also be experiencing an extraordinary rise since the March low. However, the economic data do not support a stock market rise. In the U.S., the unemployment rate has risen to 15% and more than 30 million people are out of work. The situation in Europe is similar to that in the United States. The ECB is trying to alleviate the economic difficulties caused by the crown virus with a 500 billion aid package. The European rescue package faces greater opposition than in the U.S. because 4 countries have different ideas on how to help the European economy. Some kind of aid package is needed because although economic data show an upward trend, they still point to a recessionary environment. Positive economic data is coming out of China. Exports grew by 3.5 per cent year-on-year in April instead of a double-digit decline, and inflation data were lower than expected. Consumer prices rose 3.3 percent and producer prices fell 3.1 percent year-on-year, while industrial production grew better than expected year-on-year by 3.9 percent in April. In Hungary, the MNB did not change the key interest rate at its May meeting. This is understandable because the forint has stabilized against foreign currencies and the central bank wants to see the impact of the virus on the Hungarian economy. If the economic environment becomes clearer, than necessary measures will be taken. The fund performed well in May. During the month, the fund further reduced its equity exposure, which now stands at 15%. The fund closed the emerging market Internet sector and U.S. futures positions and increased its exposure to Brazilian and European banks in the proportion. Within the credit, the fund reduced its Turkish and Hungarian exposures in several steps during the month, increased its Romanian position and at the same time opened a USDTRY long position. The fund bought bank and oil-linked bonds in May. Overall, the fund's interest rate exposure remained at the April level. On the foreign exchange side, the PLNHUF short position was closed in May.

## ASSET ALLOCATION OF THE FUND ON 05/31/2020
