Net Asset Value of institutional series:	1,177,193,242 HUF
Net Asset Value per unit:	1.001672 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund. The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation. The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days. The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%). Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

## MARKET SUMMARY:

Due to the sharp fall in oil prices, inflation slowed to 2,4% in April from 3,9% in March and the currency also seemed to stabilize by the end of the month, which are all pointing toward a possible monetary policy easing later this year. In May the decrease in money market yields continued further. The 3-month FX implied rates declined by almost 35 basis points, while the 3-month BUBOR rate stabilized around 0,9% after a 20 basis points fall. The 12-month BUBOR rate also fell from a slightly higher level to 0,9% by the end of the month. Average yields at the 3 month T-bill auctions were still around 1% at the beginning of the month, but after gradual decline the papers were sold at an average of 0,79% at the last auction. The 12-month T-bill auctions followed a similar trend, with an average yield falling to 0,84% during the month. The offered amount at the 3 month T-bill auctions was mostly 30 billion HUF with gradually declining interest, while at the 12 month T-bills auctions the accepted amount was less, but with a much higher bid to cover ratio. The NBH slightly reduced the stock of FX swap instruments, so the excess liquidity in the banking system had shrunk to 1921 billion HUF. The Hungarian central bank's QE program, which was announced at the end of April disappointed the market right after the first month. Despite the promised large amount of asset purchases, the repurchase result of the first month was only 150 billion forint. The amount gradually decreased week-by-week, and finally the first tender of June was cancelled. And because of this, the central bank may lose credibility again. On top of that, the deputy governor of the CB, Márton Nagy resigned from his post at the end of the month.

## ASSET ALLOCATION OF THE FUND ON 05/31/2020
