Total Net Asset Value of the whole Fund:	29,603,101,948 HUF
Net Asset Value of CZK series:	100,601 CZK
Net Asset Value per unit:	1.006011 CZK

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

MARKET SUMMARY:

June saw another strong performance for risk assets. Much of these gains have come about thanks to slowing rates of case growth and moves to reopen major economies, as well as remarkable levels of stimulus from governments and central banks across the world. However, in the last couple of weeks there've been signs once again of an acceleration in case growth in some countries, including the United States, raising fears for where things might be headed in the second half. The fund was able to post a performance of 1% in June. During the month the fund did not increase its duration but kept the overall interest rate risk profile somewhat higher. The fund took profit on its long-end position in the Hungarian local government bond curve and switched to the belly as the NBH keeps the curve steady and well anchored up until the belly. As the Hungarian Forint went to closer to 340 levels against the euro, the fund opened a short position in forint to an extent of 12%. The fund took profit on its position in Qatar, increased its exposure slightly to Ivory Coast and also increased exposure to financial credit.

ASSET ALLOCATION OF THE FUND ON 06/30/2020
