Net Asset Value of institutional series:	1,527,127,882 HUF
Net Asset Value per unit:	1.700596 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Just like last few months the corona virus was the focus of world's attention in June. The first wave of the epidemic appears to have subsided in Asia and Europe, while in the United States it depends on the state what stage it is at. This is a major problem for the economy. The US Federal Reserve is doing everything it can to ease the pressure on the economy, but it does not have unlimited power. The taboos are starting to fall, as the St. Louis Fed President has already admitted that even negative interest rates could be used to kick-start the economy. In Europe, the ECB is working feverishly to figure out how to get the economy back on track as soon as possible. The central bank has increased its bond-buying program to € 600 billion, compared to the expected € 500 billion, and its duration has been extended to at least the end of June 2021. More and more positive economic data is coming out of China. What may cast a shadow over the joy that nearly 80 new infections have been found in Beijing by Sunday, raising the possibility that the second wave of the virus has arrived. In Hungary, the MNB reduced the key interest rate by 15 basis points at its June meeting. The decision is incomprehensible to us, as EURHUF has finally stabilized around 340 and 15 basis points is insignificant for the economy. The MNB also indicated that a further decline in interest rates is expected. The forint did not take the news well, and weakened by almost 5% against the euro within a week. The fund achieved an outstanding performance in June and also significantly outperformed the benchmark. The biggest contributor to the performance was the banking sector and the telecommunications sector, the latter was closed by the end of the month. In addition, we established an overweight position in the defensive sector through the gold sector, which also added to the good performance in June. We still see a risk in forced bank lending, so we are looking at the Turkish market favorably only in the short term.

## ASSET ALLOCATION OF THE FUND ON 06/30/2020

Asset type	Weight
International equities	97.46 %
Current account	2.88 %
Liabilities	-0.33 %
Receivables	0.01 %
total	100.00 %
