Net Asset Value of institutional series:	49,731,924 PLN
Net Asset Value per unit:	1.031216 PLN

### INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

### MARKET SUMMARY:

Just like last few months the corona virus was the focus of world's attention in June. The first wave of the epidemic appears to have subsided in Asia and Europe, while in the United States it depends on the state what stage it is at. This is a major problem for the economy. The US Federal Reserve is doing everything it can to ease the pressure on the economy, but it does not have unlimited power. The taboos are starting to fall, as the St. Louis Fed President has already admitted that even negative interest rates could be used to kick-start the economy. In Europe, the ECB is working feverishly to figure out how to get the economy back on track as soon as possible. The central bank has increased its bond-buying program to € 600 billion, compared to the expected € 500 billion, and its duration has been extended to at least the end of June 2021. More and more positive economic data is coming out of China. What may cast a shadow over the joy that nearly 80 new infections have been found in Beijing by Sunday, raising the possibility that the second wave of the virus has arrived. In Hungary, the MNB reduced the key interest rate by 15 basis points at its June meeting. The decision is incomprehensible to us, as EURHUF has finally stabilized around 340 and 15 basis points is insignificant for the economy. The MNB also indicated that a further decline in interest rates is expected. The forint did not take the news well, and weakened by almost 5% against the euro within a week. The fund had a flat return in June and underperformed its benchmark. The underperformance was mainly due to the underweight in the utilities sector and this sector has risen the most in the Polish market over the past month due to restructuring. The fund maintains its neutral exposure in the large-cap exposure, the utility underweight has been slightly reduced, but in the commodities sector it has remained underweight. The midcap sector remains overweight. During the month, the fund increased its exposure in the Polish insurance sector. By the end of the month, the fund is slightly overweight against the benchmark.

### ASSET ALLOCATION OF THE FUND ON 06/30/2020

Asset type	Weight
