| Total Net Asset Value of the whole Fund: | 8,548,855,706 HUF |
| Net Asset Value of HUF series: | 7,566,090,596 HUF |
| Net Asset Value per unit: | 2.278117 HUF |

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund. The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation. The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days. The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%). Aegon Money Market Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Money Market Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Money Market Fund is capable of fluctuation. Aegon Money Market Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY:

At the rate setting meeting in July, the Monetary Council again implemented a 15 basis points rate cut, reducing the base rate from the previous level of 0,75% to 0,6%. The rate cut was not a surprise to the market. After the meeting, deputy governor of the CB, Barnabás Virág emphasized, that in order to support the economy in a sustainable manner the necessary easing of short-term rates has been made, which indicates that further easing is not expected in the foreseeable future. In addition to the rate cut, they are planning a reallocation between instruments affecting longer term maturities by reducing the amount of the collateralized lending facility while restarting the QE in limited amount in the segment of 15-year maturities. Regarding the short term yields, they are planning to keep it at a safe distance from a range close to zero by gradually decreasing the stock of FX swap instruments. However this process is expected to be long so short term yields will rise only at a moderate pace. The 3-month FX implied rates stagnated around 0,45% during the month. The 3 and 12 month BUBOR stabilized at 0,6%. Average yields at the 3 month T-bill auctions decreased somewhat at the beginning of the month but then they started to increase. At the 12-month T-bill auctions the average yield fell to 0,33%. The offered amount at the auctions was mostly 20 billion HUF. But the bid to cover ratio has gradually declined in July. The NBH slightly reduced the stock of FX swap instruments, so the excess liquidity in the banking system had shrunk to 1787 billion HUF.
