Start:	05/19/2020
Currency:	HUF
Total Net Asset Value of the whole Fund:	31,061,563 EUR
Net Asset Value of institutional series:	2,959,343,130 HUF
Net Asset Value per unit:	1.179689 HUF

**INVESTMENT POLICY OF THE FUND:**

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primary invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

**MARKET SUMMARY:**

The second wave of the coronavirus arrived to Europe in September, but the attitude of the governments are radically different from what it was in the spring. It seems that the political leadership is not risking another total economic shutdown, rather, albeit unspoken, they are trying to apply the model that the Swedes used in the spring. The defense against the virus is passed on to people and the political leadership try to pass laws that can slow down the spread of the virus. The chairman of the US Federal Reserve reaffirmed the new monetary policy framework for average inflation outlined in his Jackson Hole speech in September, in which no interest rate hikes are planned until at least 2023 and all means are used to meet monetary policy targets. Contrary to expectations, the dollar began to strengthen against both developed and emerging market currencies. Brexit became the headline news again in Europe after Boris Johnson announced a deadline of 15 October to conclude the Brexit talks, after which they would be ready to leave without an agreement. Experts say "hard-Brexit" is thus again a real alternative. The European economy slowed slightly after the Eurozone Purchasing Managers' Index slowed to 51.9 in August. In China, the economic growth continues after the Caixin's manufacturing PMI jumped to 53.1 in August, and the export orders sub-index became positive for the first time this year. The Caixin service sector PMI rose to 54 in August, continuing to expand in the sector, which now accounts for the bulk of the economy. In Hungary, the MNB surprised the markets when it raised the depo rate by 15 basis points from 60 to 75. Most likely they would like to prevent the forint from weakening further with this move. The EURHUF exchange rate went above 366 after the announcement, but by the end of the month the forint had strengthened slightly. The spread of the coronavirus in Hungary is the second worst in Europe and this also affects the performance of the economy. The MNB has already put together an economic package designed to help the recovery of the Hungarian economy. The fund achieved a slight negative return in September, but outperformed its benchmark. In September, the best performing sectors were solar energy and healthcare. We continue to see good potential in the video game and semiconductor sectors, and waiting for a favorable entry point to further increase the fund's exposure. The underperforming sectors over the past month have been insurance and technology. The fund's equity allocation is slightly below the benchmark, at approx. 95%.

ASSET ALLOCATION OF THE FUND ON 09/30/2020	
Asset type	Weight
