Net Asset Value of institutional series:	42,454,862 PLN
Net Asset Value per unit:	0.883489 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The corona virus continued to spread uncontrollably in October, reaching even the top of the political leadership. As it turned out, U.S. President Donald Trump and his immediate family were also infected with the virus. New cases are already higher than they were in the spring, and the mortality rate is also rising proportionally. It seems that "virus fatigue" is starting to take hold in the population and austerity is no longer taken as seriously as it was in the spring. The result may be that certain sectors of the economy will have to be shut down again. The only solution would be to produce the vaccine as soon as possible, but even in a best case scenario, this is not expected until next spring. U.S. economic data improved in October. The September ISM non-manufacturing index was better than expected, projecting an improvement in service sector, despite the still raging pandemic situation. Further improvement of the economy depends on whether the next economic rescue package is approved by U.S. lawmakers. Europe is suffering from wave 2 of the epidemic the same way as the U.S. In Germany, the hospitality and entertainment industry will be closed down in November, while in France, due to the much faster-than-expected spread of the epidemic, French President Macron has decided to certain closures in the economy, but unlike in the spring left the schools open. The Chinese economy grew 4.9 percent year-over-year in the third quarter, massively outperforming other regions, although analysts expected more, at 5.2 percent. Industrial production in September grew by 6.9 percent and retail sales by 3.3 percent in September from a year earlier, they were both higher than expected. The PMI value of the Caixin / Markit service sector in September came in strong at 54.8, showing economic expansion. For now, it seems that the Chinese economy has already overcome the economic difficulties caused by the virus and started to grow again. The corona virus is also spreading uncontrollably in Hungary. Nothing has been utilized from the previously announced economic stimulus package, and the forint shows very well the vulnerability of the economy. Although the domestic currency has not weakened against regional currencies, it is very close to the March low against the euro. The fund achieved a negative return in October, but outperformed its benchmark. The fund maintains a neutral level in the large-cap exposure and an underweight position in the utilities, oil and commodities sectors. The mid-cap sector remains overweight. Although the banking sector is underweight, we prefer stable large banks to smaller ones. We will continue to overweight the gaming and retail sectors because we believe that these two sectors will perform very well in the near future. Despite the economic closures, we believe that the Polish economy will perform well in the coming months, so the fund is slightly overweight against the benchmark. Although the fund was involved in the IPO listing of Allegro last month, we have greatly reduced this exposure because we believe the company is extremely overpriced. If the valuation decreases in the future, we will be interested in it again.

ASSET ALLOCATION OF THE FUND ON 10/31/2020
