Total Net Asset Value of the whole Fund:	4,005,928,142 HUF
Net Asset Value of PI series:	5,578 PLN
Net Asset Value per unit:	0.683785 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

In November, we got the answers to two questions that preoccupied investors throughout the year. First, we have finally found out who will be president of the United States in the next four years, and the other, perhaps more importantly, in the current circumstances, is when we can expect to be vaccinated against the corona virus. The U.S. presidential election was won by former President Barack Obama's Vice President Joe Biden. More importantly, in the case of the corona virus, we can finally see the light at the end of the tunnel. In November, three drug companies announced that the Phase 3 trials were extremely successful, and mass vaccinations could begin as early as the first half of December. U.S. stock market indices rose significantly in November on news that the vaccine is about to be distributed in the near future. The Russell 2000 index was able to break through the 2018 level and hit a new all-time high, and the Dow Jones index broke the psychologically important 30,000 mark for the first time in its history. Stock markets are extremely optimistic about the future and seem to price in the best case scenario. It is true that starting to vaccinate the population next spring will be of great help to the economy, but stock markets are currently pricing that by next summer, everything will be back to pre-Covid-19. At least that what share prices and market expectations reflect. The European economy is mixed. Although the German consumer sentiment index fell from the previous -3.1 to -6.7 in November, below the expected -4.9, the euro area manufacturing PMI remained at 48.8 in October, compared with the previous month value of 53.7. This is the fourth month that the indicator is above 50, which indicates the expansion of the economy. New orders rose from 57 to 58.7, the highest reading since January 2018. The economies of China and other Asian countries may be already thru the pandemic, at least macroeconomic data suggest so. The Caixin's manufacturing PMI was 53.6, slightly higher than what it was expected, indicating expansion in the economy. China's manufacturing PMI was better than expected, reaching 52.1 instead of the expected 51.5 in November. The fund performed positively in November, but slightly underperformed its benchmark. There have been major changes in Turkey over the past month. The head of the central bank and the Turkish finance minister have been replaced. These changes affected the Turkish stock market, and in light of this, we reshaped the portfolio. We are overweight in the banking sector and pro-cyclical industries, as we believe that changes in leadership will make the Turkish economy much more predictable, and this will have a good impact on these sectors. During the month, we closed the overweight position in the gold and retail sectors, because we think that the vaccine will soon be available worldwide, we have bought Turkish airlines, in the belief that tourism will soon return to the pre-Covid-19 period. The fund is equal weighted relative to the benchmark.

ASSET ALLOCATION OF THE FUND ON 11/30/2020

Asset type	Weight
