Total Net Asset Value of the whole Fund:	4,496,809,060 HUF
Net Asset Value of HUF series:	2,201,698,034 HUF
Net Asset Value per unit:	1.576228 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreigndomiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk), are observed. The fund management company, exercising all due care, determines the means of utilising the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk), are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equiry investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discr

2010	29.33 %	28.95 %

In December, the Covid-19 vaccine has finally arrived, giving a big boost to the markets. The vaccine will be of great help to the world's economies, and now it is a possibility that in the summer of 2021, the economies could reach the levels where they were before the virus broke out. U.S. stock markets continued to rise on vaccine news. The Dow Jones was able to stay above the psychologically important 30,000 level, the Russel 2000 has also reached a new all-time high, and broken through the 2000 level. Capital markets are already confident that the world's economies will recover by next summer, so fresh capital has not only gone into the growth sectors, but value-based investments have become very popular too. Because of this, the best performing index has been the Russel 2000 in the last 2 months. At the December Fed meeting, the US Federal Reserve changed only one thing in its monetary policy announcement: \$ 120 billion a month in bond purchases will be maintained until significant progress is made on inflation and on unemployment, while longer-term bond purchases were not mentioned. The European economy is mixed. Although the expectations of the German ZEW Institute's economic sub-index sentiment jumped from 39 to 55 in November, exceeding the expected value of 46, the German consumer sentiment index came in at -7.3 in December, compared to the revised 6.8- by reading. The Brexit has been finalized on Christmas Day, so the uncertainty has disappeared, and this could also have a positive effect on the future performance of the European economy. The economies of China and other Asian countries may already be thu the pandemic, at least macroeconomic data suggest so. The Caixin / Markit Chinese Manufacturing Purchasing Managers' Index was higher than expected at 54.9 in November, the highest number in a decade. A similar indicator for South Korea was 52.9, a level not seen since 2011. Looking back to 2020, we can say that the Asian countries, but mainly China, that have managed the epidemic the best, and this is reflected in the economic data. The corona virus continues to spread uncontrollably in Hungary. Nothing has been implemented from the previously announced economic stimulus package, and the Hungarian forint shows the vulnerability of the economy as well. The forint gave back all its gains from the beginning of the month, and by the end of the year it had fallen to an 8-week low against the euro. The fund performed positively in December, but slightly underperformed its benchmark. The reason for the underperformance was that due to the index re-weighting, several small-cap stocks were included, which in our opinion became extremely overpriced, which is why we did not buy them. We remain optimistic about the Turkish market. The new financial leadership has made all the necessary decisions for the Turkish economy to perform well in the long run. Due to the measures mentioned above, we maintain the fund overweight against the benchmark in the banking sector and in the pro-cyclical industries. The fund overall is overweight against the benchmark
