Net Asset Value of R series:	808,000,234 HUF
Net Asset Value per unit:	1.176642 HUF

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

MARKET SUMMARY:

In December, the Covid-19 vaccine has finally arrived, giving a big boost to the markets. The vaccine will be of great help to the world's economies, and now it is a possibility that in the summer of 2021, the economies could reach the levels where they were before the virus broke out. U.S. stock markets continued to rise on vaccine news. The Dow Jones was able to stay above the psychologically important 30,000 level, the Russel 2000 has also reached a new all-time high, and broken through the 2000 level. Capital markets are already confident that the world's economies will recover by next summer, so fresh capital has not only gone into the growth sectors, but value-based investments have become very popular too. Because of this, the best performing index has been the Russel 2000 in the last 2 months. At the December Fed meeting, the US Federal Reserve changed only one thing in its monetary policy announcement: \$ 120 billion a month in bond purchases will be maintained until significant progress is made on inflation and on unemployment, while longer-term bond purchases were not mentioned. The European economy is mixed. Although the expectations of the German ZEW Institute's economic sub-index sentiment jumped from 39 to 55 in November, exceeding the expected value of 46, the German consumer sentiment index came in at -7.3 in December, compared to the revised -6.8- by reading. The Brexit has been finalized on Christmas Day, so the uncertainty has disappeared, and this could also have a positive effect on the future performance of the European economy. The economies of China and other Asian countries may already be thru the pandemic, at least macroeconomic data suggest so. The Caixin / Markit Chinese Manufacturing Purchasing Managers' Index was higher than expected at 54.9 in November, the highest number in a decade. A similar indicator for South Korea was 52.9, a level not seen since 2011. Looking back to 2020, we can say that the Asian countries, but mainly China, that have managed the epidemic the best, and this is reflected in the economic data. The corona virus continues to spread uncontrollably in Hungary. Nothing has been implemented from the previously announced economic stimulus package, and the Hungarian forint shows the vulnerability of the economy as well. The forint gave back all its gains from the beginning of the month, and by the end of the year it had fallen to an 8-week low against the euro. The fund achieved a positive return in December. By the end of the month, we had reduced our equity weighting from 50% to 40% after taking profits in the well-performing bank and regional oil positions. In December, we increased our exposure to the emerging markets, especially in South Africa. In addition, we have increased our exposure in the emerging market technology and video game sectors. Although value-based investments outperformed in the last two months of last year, but after the rally, we believe that it is worth rotating back into long-term growth sectors. In December, we further increased our emerging market weight after believing that emerging markets are in a more stable position both economically and in the fight against the virus. The weakening of the US dollar will also greatly help these economies.

ASSET ALLOCATION OF THE FUND ON 12/31/2020
