Start:	06/02/2020
Currency:	HUF
Total Net Asset Value of the whole Fund:	64,567,904 EUR
Net Asset Value of R series:	1,512,036,246 HUF
Net Asset Value per unit:	1.299360 HUF

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primary invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

MARKET SUMMARY:

In December, the Covid-19 vaccine has finally arrived, giving a big boost to the markets. The vaccine will be of great help to the world's economies, and now it is a possibility that in the summer of 2021, the economies could reach the levels where they were before the virus broke out. U.S. stock markets continued to rise on vaccine news. The Dow Jones was able to stay above the psychologically important 30,000 level, the Russel 2000 has also reached a new all-time high, and broken through the 2000 level. Capital markets are already confident that the world's economies will recover by next summer, so fresh capital has not only gone into the growth sectors, but value-based investments have become very popular too. Because of this, the best performing index has been the Russel 2000 in the last 2 months. At the December Fed meeting, the US Federal Reserve changed only one thing in its monetary policy announcement: \$ 120 billion a month in bond purchases will be maintained until significant progress is made on inflation and on unemployment, while longer-term bond purchases were not mentioned. The European economy is mixed. Although the expectations of the German ZEW Institute's economic sub-index sentiment jumped from 39 to 55 in November, exceeding the expected value of 46, the German consumer sentiment index came in at -7.3 in December, compared to the revised -6.8- by reading. The Brexit has been finalized on Christmas Day, so the uncertainty has disappeared, and this could also have a positive effect on the future performance of the European economy. The economies of China and other Asian countries may already be thru the pandemic, at least macroeconomic data suggest so. The Caixin / Markit Chinese Manufacturing Purchasing Managers' Index was higher than expected at 54.9 in November, the highest number in a decade. A similar indicator for South Korea was 52.9, a level not seen since 2011. Looking back to 2020, we can say that the Asian countries, but mainly China, that have managed the epidemic the best, and this is reflected in the economic data. The corona virus continues to spread uncontrollably in Hungary. Nothing has been implemented from the previously announced economic stimulus package, and the Hungarian forint shows the vulnerability of the economy as well. The forint gave back all its gains from the beginning of the month, and by the end of the year it had fallen to an 8-week low against the euro. The fund achieved a positive return in December and also outperformed the benchmark index despite the fact that value-based investments outperformed the growth sector in the past month. In December, the best performing sectors were the solar and clean energy sectors. The weakest performing sector was the emerging market technology sector, of which we increased the fund's exposure at the end of the month. The fund is equally weighted against the benchmark.

ASSET ALLOCATION OF THE FUND ON 12/31/2020

Asset type	Weight
Collective securities	95.89 %
International equities	2.34 %
Hungarian equities	0.76 %
