Currency:	USD
Total Net Asset Value of the whole Fund:	21,827,065 EUR
Net Asset Value of USD series:	127,800 USD
Net Asset Value per unit:	1.278004 USD

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with capital appreciation by investing in the sovereign- and quasi-sovereign bond market of Emerging European countries. The fund has no rating constraints, the fund has a permission to invest in any kind of issuer without limitation on its long-term foreign currency debt rating. The fund aims to reach the highest capital gain with rational risk taking. The fund primarily invests on the sovereign- and quasi-sovereign bond market of Emerging European countries denominated in foreign currency, but holds Hungarian local currency, long- and short-term bonds with diversification and liquidity management purposes. The fund may also invest in mortgage backed securities, and short- and long-term, fixed or floating securities of other financial institutions, municipalities or other business corporations, structured and convertible bonds. The fund's general risk level and the measure of the deviation from the target weights are determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The core part of the fund consists of the foreign currency denominated, sovereign and quasi-sovereign bonds of Central and Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), Southeast Europe (Serbia, Turkey), Baltic states (Lithuania, Latvia) and the countries of the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and also holds Hungarian local currency bonds with diversification and liquidity management purposes. In case of attractive market conditions (e.g. possible upgrade of an issuer's long-term foreign currency debt rating, change of the yield curve, market mispricing, etc.) the fund may invest in bonds of issuers not listed above. The fund does not intend to invest more than 25% of its assets in a single country. The target weight for the fund's fixed income investments in the above listed countries (target countries) is 95%. The aimed risk profile of the fund is intermediate. We do not use constraints on foreign currency debt ratings. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged debt-type collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged to the target currency (USD), although depending on market circumstances the fund may even have an open currency position. The investment policy of the fund changed on the 30th of December, 2016. Since then the fund has no benchmark, and fund performance before the change is not applicable.

MARKET SUMMARY:

FOMC left the US monetary policy unchanged, with Chair Jerome Powell confirming that any talk of tapering asset purchases is "premature". US GDP grew at a decent 4.0% QoQ annualized rate in Q4 '20, but momentum slowed down at the end of 2020 amid new restrictions. Fourth-quarter GDP largely stagnated in Germany, while it dropped 1.3% QoQ in France and expanded 0.4% QoQ in Spain. In financial markets, widespread discussion about stretched valuations unsettled investors as major equity indices shed 1-3% in the last week of January. Fixed-income markets traded firmer as dovish central bank talk provided an additional tailwind. The USD had been moving side-way throughout the month until strengthened on MoM basis, underpinning its safe-haven status, but EUR-USD managed to defend the 1.21 line. According to Barclays, in EM fixed income, the trend of accelerating inflows into hard- and waning inflows into local-currency funds strengthened. EM credit funds saw the largest weekly inflows since February 2019. In contrast, EM local currency funds saw essentially flat flows over the week. EM credit total returns have benefited from the pause in the rise of US treasury yields over recent weeks, and a positive feedback loop between performance and flows has seemingly emerged. Returning USD strength has been a headwind for EM local markets. During last month we slightly increased duration for Turkey and Ukraine, the duration for all other countries remained at neutral levels during the month.
