 EUR

 Total Net Asset Value of the whole Fund:
 68,389,041 EUR

 Net Asset Value of EUR series:
 9,465,613 EUR

 Net Asset Value per unit:
 0.011990 EUR

## INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primary invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

## MARKET SUMMARY:

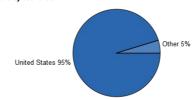

In January, markets continued where they left off in December, with indices continuing to set new all-time highs. Investors again favored the growth sector over the value sector. What is most noteworthy is that in the last third of January, speculation rose to unprecedented levels. There were shares that went up more than a hundredfold because Elon Musk, the founder of Tesla, mentioned it on Twitter. However, the chairman of the US Federal Reserve was not interested in this, because at their meeting in late January, they communicated that they did not think that any bubble had formed in the stock market. The European economy is showing a sign of weakness. German business sentiment slipped back from 92.1 to 90.1, compared to the expected value of 91.4. The present index fell to 89.2 from 91.3 in December, which is also below the projected reading of 90.6. The future indicator index was expected to show some improvement, but in the shadow of the coronavirus, it also fell to 90.1 from 92.1 the previous month. The economies of China and other Asian countries may already be through the pandemic, at least macroeconomic data suggests so. According to recent Chinese macro data, in the fourth-quarter GDP grew by 6.5 perce where 1.2 percent prevents are prevented to the expected 6.1, and industrial production rose more than expected by 7.3 percent year-on-year. The GDP of South Korea, the other leading Asian economy, also grew more than expected on a quarterly basis by 1.1 percent in the last month of last year. Looking back to 2020, we can say that it is mainly China, but overall Asian countries, that have managed the pandemic the best, and this is also reflected in the economic data. The coronavirus continues to spread uncontrollably in Hungary, although by the end of January the numbers had started to improve slightly. None of the previously announced economic stimulus packages have yet materialized, and unfortunately more and more small businesses, especially those involved in hospitality, are closing down permanentl
