Start:	07/29/2013
Currency:	PLN
Total Net Asset Value of the whole Fund:	25,271,382,337 HUF
Net Asset Value of PLN series:	4,677,338 PLN
Net Asset Value per unit:	1.227706 PLN

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (AKK) on behalf of the State of Hungary, as well as bonds issued by the National Bark of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities. All equities. At the same time, the fund maintains the option to hedge currency risks.

vere volatile in March. U.S Although the major stock indices closed at new all-time highs by the end of the month, the markets were volatile in March. U.S. long-term yields hit a 2-year high, to which stock markets reacted with fierce price movements. At first, investors reallocated from the growth sector to the value-based sector because of the rate rise, but when interest rates fell slightly, money flowed back into the growth sector again. It didn't help the investment environment that after the March the FOMC decision, the Fed president could not reassure the markets. Powell has finally stated that the central bank will not raise interest rates until at least 2023, but has not been able to give a meaningful answer as to what they will do if inflation is significantly higher than the forecast. Although the virus is still not under control in Europe, economic data show that the light is already visible at the end of the tunnel. The Manufacturing Purchasing Managers 'Index jumped to an all-time high of 62.4 from a previous month's 57.9 and an the expected 57.6. The key interest rate and the asset purchase program were not changed by the ECB at the interest rate decision meeting, and it was heavily emphasized, that they would not intervene during a temporary rise of inflation. Although the economies of China and other Asian countries may already be behind the crisis caused by the corona virus, it seems that, even temporarily, the Chinese economy has begun to slow down. The official Chinese manufacturing PMI fell to 50.5 after 51.3 in January, while Caixin's smaller company index fell from 51.5 to 50.9. The coming months will show whether this is just a temporary slowdown or whether we can expect a more serious slowdown. The forint approached last November's high in March, but by the end of the month closed where it started. The MNB fine-tuned its framework of the asset purchase program: they announced that the 50 per cent purchase limit on bonds' series had been abolished, while the weekly purchase volume would not change. They basically expanded the room for maneuvering in longer-term papers, having previously reached the earlier limits here. What is also worth mentioning is that the central bank is already expecting inflation of 4% or more for this year. The fund achieved a negative return in March. The negative result was mainly due to the Turkish lira, EMFX and commodity positions. We swapped the entire gold exposure to silver and platinum last month, but the silver position was stopped out during the month. The position of the Turkish lira has also been stopped out after the sharp currency movements in March, and we believe that the original investment thesis in the Turkish economy has changed. We further reduced our bond exposure by selling Serbian, Azerbaijani, Ukrainian and Turkish papers. In contrast, we bought Romanian and Polish bonds, of which we already sold Romanian during the month due to profit realization. On the currency side, the ruble and PLNHUF exposures were closed, the Brazilian real and the forint long positions were kept unchanged.
