Net Asset Value of EUR series:	1,159,923 EUR
Net Asset Value per unit:	1.472668 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Although the major stock indices closed at new all-time highs by the end of the month, the markets were volatile in March. U.S. long-term yields hit a 2-year high, to which stock markets reacted with fierce price movements. At first, investors reallocated from the growth sector to the value-based sector because of the rate rise, but when interest rates fell slightly, money flowed back into the growth sector again. It didn't help the investment environment that after the March the FOMC decision, the Fed president could not reassure the markets. Powell has finally stated that the central bank will not raise interest rates until at least 2023, but has not been able to give a meaningful answer as to what they will do if inflation is significantly higher than the forecast. Although the virus is still not under control in Europe, economic data show that the light is already visible at the end of the tunnel. The Manufacturing Purchasing Managers' Index jumped to an all-time high of 62.4 from a previous month's 57.9 and an expected 57.6. The key interest rate and the asset purchase program were not changed by the ECB at the interest rate decision meeting, and it was heavily emphasized, that they would not intervene during a temporary rise of inflation. Although the economies of China and other Asian countries may already be behind the crisis caused by the corona virus, it seems that, even temporarily, the Chinese economy has begun to slow down. The official Chinese manufacturing PMI fell to 50.5 after 51.3 in January, while Caixin's smaller company index fell from 51.5 to 50.9. The coming months will show whether this is just a temporary slowdown or whether we can expect a more serious slowdown. The forint approached last November's high in March, but by the end of the month closed where it started. The MNB fine-tuned its framework of the asset purchase program: they announced that the 50 per cent purchase limit on bonds' series had been abolished, while the weekly purchase volume would not change. They basically expanded the room for maneuvering in longer-term papers, having previously reached the earlier limits here. What is also worth mentioning is that the central bank is already expecting inflation of 4% or more for this year. The fund achieved a positive return in March. We continue to hold the UK exposure in the fund instead of the European one as we believe that all the negative effects of Brexit are already priced and therefore the English companies are relatively undervalued. The fund remains underweight against the benchmark because we believe the markets are still highly overvalued in the short term, but we have taken on individual equity exposures where we believe the share price does not reflect the value of the firm. In addition, we have taken a position in a U.S. sector ETF, which we believe is at the beginning of a long-term trend, and its future growth potential is far above market growth.

ASSET ALLOCATION OF THE FUND ON 03/31/2021

Asset type	Weight
