Net Asset Value of HUF series:	7,156,392,610 HUF
Net Asset Value per unit:	2.273573 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund. The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation. The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days. The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%). Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY:

In March, YoY inflation rose to 3.7% from 3.1% in February, in line with market expectations, driven mainly by rising fuel prices. In the coming months, due to base effects, the pace of inflation may increase even further, approaching the 5% level. In March the central bank left the key rate unchanged at its interest rate decision meeting, and the one-week deposit rate did not change during Thursday's tenders either. The central bank's communication continues to be hawkish, they pay special attention to inflation developments, and they are ready to use the appropriate tools if the risks warrants it. In March, 3-month FX implied yields rose from 59 basis points to 77 basis points and 12-month FX implied yields rose from 71 basis points to 95 basis points. The average yields on 3-month T-bill auctions stabilized around the Central Bank's base rate and the average yields on annual T-bill auctions stabilized around 67 basis points. The oversubscription rate for the securities ranged from 2 to 3 times, except for one auction. In the one-week deposit tenders held on Thursdays in March, all bids submitted were accepted by the central bank, leaving ample of interbank liquidity.

ASSET ALLOCATION OF THE FUND ON 03/31/2021
